

Exercise 6

Ziyu Ma

Structure From Motion

I have some question about the part 2.1 Essential matrix estimation. I implemented im1 and im2 according to the order in our lecture slides, but the assertion is evaluated to be wrong. I cannot find out the reason for that. Nevertheless, the final result looks reasonable (after excluding image 8 and 9).

Model Fitting

Estimated coefficients	k	b
true	1	10
linear regression	0.6159656578755458	8.961727141443642
RANSAC	0.9643894946568982	9.98292129496683
